RECEIVED
8/29/02

Dear Dr. MacDonald:

The goals and purposes of the National Marine Sanctuary Program are "to facilitate to the extent compatible with the primary objective of resource protection all public and private uses of the resources of these marine areas not prohibited pursuant to other authorities." We believe that resource protection should be the focus of Sanctuary activities and that human uses must not interfere with the primary objective.

Stellwagen Bank is a biodiverse area and management decisions should be based on the ecosystem, not on fisheries, or species-specific issues. Congress designated the Stellwagen Bank National Marine Sanctuary as a National Treasure and it must be treated as a protected area and managed for the conservation of species as well as for the health of the ecosystem.

Decisions should be made utilizing global information, as many of the inhabitants of the Sanctuary are seasonal and migratory in nature. Therefore, it is essential that the Sanctuary not only coordinates with the regional and international communities, but the Sanctuary should also have a strong participation in Fisheries management activities that impact the Sanctuary ecosystem.

Decisions regarding the Sanctuary need to go through a well-publicized and extensive public hearing process in order to encourage a wide range of participants at all meetings. All public comments and management decisions should be available on the Sanctuary website. All Sanctuary programs should be available for review on an annual basis and should be posted on the Sanctuary website for public comment and input.

Currently there are a number of potential activities that could negatively impact the marine species that utilize the Sanctuary waters. We believe that critical issues are: (Check all that are important to you)

- ☒ Reducing fixed gear fishing activities in areas when whales are present to minimize the risk of whales becoming entangled in gear.
- ☒ Speed limits within the Sanctuary must be imposed to protect animals from ship strikes.
- ☒ Vessels should not be able to dump waste, pump bilges, or dump ballast within the Sanctuary.
- ☒ Activities that adversely affect the seabed should be prohibited within the Sanctuary.
- ☒ Fishing and recreational vessels must adhere to the same whale watch guidelines and policies as commercial whale watching vessels.
- ☒ Personal watercraft including, but not limited to, kayaks and jet-skis, are improper equipment for whale-watching within the Sanctuary.
- ☒ Enforcement of rules and regulations in the Sanctuary is essential.
- ☒ A monitoring program is essential to understand the current health of the ecosystem and to identify any changes before a problem becomes critical.
- ☒ The Sanctuary should have strong participation in Fisheries management activities and decisions that impact the Sanctuary ecosystem.
- ☒ The Sanctuary must lead by example by reducing waste through the use of recycled goods; alternative energy; and other methods of minimizing waste.

- ☒ Avoid putting PCB's in the oceans & also minimizing shock waves sent thru the oceans by the military &/or anyone else.

Sincerely,

Stewart Meyer

In June, that's their mating area. what an awesome site (80 whales mating) approx.
There should be a similar Sanctuary in the Pacific ocean, near Ana Cortes, WA, for the killer/ orcas whales also.

Congress designated the Stellwagen Bank National Marine Sanctuary as a National Treasure and it must be treated as a protected area and managed for the conservation of species as well as for the health of the ecosystem.

Decisions should be made utilizing global information, as many of the inhabitants of the Sanctuary are seasonal and migratory in nature. Therefore, it is essential that the Sanctuary not only coordinates with the regional and international communities, but the Sanctuary should also have a strong participation in Fisheries management activities that impact the Sanctuary ecosystem.

Decisions regarding the Sanctuary need to go through a well-publicized and extensive public hearing process in order to encourage a wide range of participants at all meetings. All public comments and management decisions should be available on the Sanctuary website. All Sanctuary programs should be available for review on an annual basis and should be posted on the Sanctuary website for public comment and input.

Currently there are a number of potential activities that could negatively impact the marine species that utilize the Sanctuary waters. We believe that critical issues are: (Check all that are important to you)

- ☒ Reducing fixed gear fishing activities in areas when whales are present to minimize the risk of whales becoming entangled in gear.
- ☒ Speed limits within the Sanctuary must be imposed to protect animals from ship strikes.
- ☒ Vessels should not be able to dump waste, pump bilges, or dump ballast within the Sanctuary.
- ☒ Activities that adversely affect the seabed should be prohibited within the Sanctuary.
- ☒ Fishing and recreational vessels must adhere to the same whale watch guidelines and policies as commercial whale watching vessels.
- ☒ Personal watercraft including, but not limited to, kayaks and jet-skis, are improper equipment for whale-watching within the Sanctuary.
- ☒ Enforcement of rules and regulations in the Sanctuary is essential.
- ☒ A monitoring program is essential to understand the current health of the ecosystem and to identify any changes before a problem becomes critical.
- ☒ The Sanctuary should have strong participation in Fisheries management activities and decisions that impact the Sanctuary ecosystem.
- ☒ The Sanctuary must lead by example by reducing waste through the use of recycled goods; alternative energy; and other methods of minimizing waste.

☒ GREAT IDEA - KEEP UP THE GOOD WORK FOR THE SAKE OF THE WHALES!

Sincerely,

William P. ...

Stellwagen Bank National Marine Sanctuary
175 Edward Foster Road
Scituate, MA 02066

Dear Dr. MacDonald:

The goals and purposes of the National Marine Sanctuary Program are "to facilitate to the extent compatible with the primary objective of resource protection all public and private uses of the resources of these marine areas not prohibited pursuant to other authorities." We believe that resource protection should be the focus of Sanctuary activities and that human uses must not interfere with the primary objective.

Stellwagen Bank is a biodiverse area and management decisions should be based on the ecosystem, not on fisheries, or species-specific issues. Congress designated the Stellwagen Bank National Marine Sanctuary as a National Treasure and it must be treated as a protected area and managed for the conservation of species as well as for the health of the ecosystem.

Decisions should be made utilizing global information, as many of the inhabitants of the Sanctuary are seasonal and migratory in nature. Therefore, it is essential that the Sanctuary not only coordinates with the regional and international communities, but the Sanctuary should also have a strong participation in Fisheries management activities that impact the Sanctuary ecosystem.

Decisions regarding the Sanctuary need to go through a well-publicized and extensive public hearing process in order to encourage a wide range of participants at all meetings. All public comments and management decisions should be available on the Sanctuary website. All Sanctuary programs should be available for review on an annual basis and should be posted on the Sanctuary website for public comment and input.

Currently there are a number of potential activities that could negatively impact the marine species that utilize the Sanctuary waters. We believe that critical issues are: (Check all that are important to you)

- ☒ Reducing fixed gear fishing activities in areas when whales are present to minimize the risk of whales becoming entangled in gear.
- ☒ Speed limits within the Sanctuary must be imposed to protect animals from ship strikes.
- ☒ Vessels should not be able to dump waste, pump bilges, or dump ballast within the Sanctuary.
- ☒ Activities that adversely affect the seabed should be prohibited within the Sanctuary.
- ☒ Fishing and recreational vessels must adhere to the same whale watch guidelines and policies as commercial whale watching vessels.
- ☒ Personal watercraft including, but not limited to, kayaks and jet-skis, are improper equipment for whale-watching within the Sanctuary.
- ☒ Enforcement of rules and regulations in the Sanctuary is essential.
- ☒ A monitoring program is essential to understand the current health of the ecosystem and to identify any changes before a problem becomes critical.
- ☒ The Sanctuary should have strong participation in Fisheries management activities and decisions that impact the Sanctuary ecosystem.
- ☒ The Sanctuary must lead by example by reducing waste through the use of recycled goods; alternative energy; and other methods of minimizing waste.
- ☒ Protect the habitat of Marine life

Sincerely,

Sara Sterling

Currently there are a number of potential activities that could negatively impact the marine species that utilize the Sanctuary waters. We believe that critical issues are: (Check all that are important to you)

- ☒ Reducing fixed gear fishing activities in areas when whales are present to minimize the risk of whales becoming entangled in gear.
- ☒ Speed limits within the Sanctuary must be imposed to protect animals from ship strikes.
- ☒ Vessels should not be able to dump waste, pump bilges, or dump ballast within the Sanctuary.
- ☒ Activities that adversely affect the seabed should be prohibited within the Sanctuary.
- ☒ Fishing and recreational vessels must adhere to the same whale watch guidelines and policies as commercial whale watching vessels.
- ☒ Personal watercraft including, but not limited to, kayaks and jet-skis, are improper equipment for whale-watching within the Sanctuary.
- ☒ Enforcement of rules and regulations in the Sanctuary is essential.
- ☒ A monitoring program is essential to understand the current health of the ecosystem and to identify any changes before a problem becomes critical.
- ☒ The Sanctuary should have strong participation in Fisheries management activities and decisions that impact the Sanctuary ecosystem.
- ☒ The Sanctuary must lead by example by reducing waste through the use of recycled goods; alternative energy; and other methods of minimizing waste.

*Please support any & all measures that will protect
& preserve this wonderful & special Sanctuary
and its inhabitants*

Sincerely,

Marywinne Sherwood

Dear Dr. MacDonald:

The goals and purposes of the National Marine Sanctuary Program are "to facilitate to the extent compatible with the primary objective of resource protection all public and private uses of the resources of these marine areas not prohibited pursuant to other authorities." We believe that resource protection should be the focus of Sanctuary activities and that human uses must not interfere with the primary objective.

Stellwagen Bank is a biodiverse area and management decisions should be based on the ecosystem, not on fisheries, or species-specific issues. Congress designated the Stellwagen Bank National Marine Sanctuary as a National Treasure and it must be treated as a protected area and managed for the conservation of species as well as for the health of the ecosystem.

Decisions should be made utilizing global information, as many of the inhabitants of the Sanctuary are seasonal and migratory in nature. Therefore, it is essential that the Sanctuary not only coordinates with the regional and international communities, but the Sanctuary should also have a strong participation in Fisheries management activities that impact the Sanctuary ecosystem.

Decisions regarding the Sanctuary need to go through a well-publicized and extensive public hearing process in order to encourage a wide range of participants at all meetings. All public comments and management decisions should be available on the Sanctuary website. All Sanctuary programs should be available for review on an annual basis and should be posted on the Sanctuary website for public comment and input.

Currently there are a number of potential activities that could negatively impact the marine species that utilize the Sanctuary waters. We believe that critical issues are: (Check all that are important to you)

- ☒ Reducing fixed gear fishing activities in areas when whales are present to minimize the risk of whales becoming entangled in gear.
